

TextSelect.click - Complete Copy Guide

Features Page

Hero Section

Headline:

"Every feature. Zero friction."

Subhead:

"TextSelect works the way your brain expects text selection to work. Here's everything it does—and why it matters."

Feature 1: Smart Symbol Selection

Headline:

"Select complex strings. Instantly."

Body Copy:

Stop fighting with your browser over hyphens, underscores, and slashes. TextSelect understands that `my-variable-name`, `file_path_2024.pdf`, and `https://api.example.com/v1/users` are single units—not random words with annoying punctuation.

Use Cases:

- File names: `project-final-v3.docx` ✓
- Code variables: `API_KEY_2024` ✓
- URLs: `docs.site.com/guide/setup` ✓
- Email addresses: `user.name@company-name.io` ✓

Technical Note:

Works with: `-` `_` `.` `/` `:` `@` `+` and more. Customize which symbols matter to you.

Feature 2: Quick Copy Button

Headline:

"Copy in one click. Literally."

Body Copy:

Double-click to select. A copy button appears. Click it. Done. No right-click menus. No Ctrl+C. No "did I actually copy that?" anxiety.

Why this matters:

Your workflow shouldn't require keyboard gymnastics. This is especially clutch when you're copying multiple strings in a row—API keys, config values, terminal commands. One click, next task.

Feature 3: Select Text in Hyperlinks**Headline:**

"Grab links without clicking them."

Body Copy:

Ever try to copy a URL from a hyperlink and accidentally navigate away? Yeah, we fixed that. Hover over any link, double-click, and TextSelect selects the text—without triggering the link.

Perfect for:

- Copying reference links for documentation
 - Grabbing URLs from articles without losing your place
 - Extracting embed codes or API endpoints from docs
-

Feature 4: Customizable Symbol Rules**Headline:**

"Your workflow, your rules."

Body Copy:

Not everyone needs periods included in their selections. Not everyone wants colons. TextSelect lets you toggle which symbols get treated as part of a word—so it adapts to how *you* work.

Settings Include:

- Hyphen (⌘) - Default: ON
- Underscore (⌘) - Default: ON
- Period (⌘) - Default: OFF
- Slash (⌘) - Default: ON

- Colon (Ⓒ) - Default: ON
- Plus (Ⓐ) - Default: ON
- Comma (Ⓓ) - Default: OFF

Pro tip:

If you're a developer, turn everything ON. If you're a writer, you probably only need hyphens and underscores.

Feature 5: Privacy First

Headline:

"100% local. Zero tracking."

Body Copy:

TextSelect doesn't phone home. It doesn't track your data. It doesn't sell your browsing habits. It runs entirely in your browser, modifying selection behavior locally. Your clipboard is yours.

Technical Details:

- No external API calls
 - No analytics
 - No third-party libraries that track
 - Open-source (see our GitHub)
-

Bottom CTA Section

Headline:

"Ready to fix your copy/paste workflow?"

CTA Buttons:

- Primary: "Install for Chrome"
- Secondary: "Try Firefox" | "Get for Edge"

Subtext:

"Free forever. No account. No data collection. 50,000+ users trust TextSelect."

Playground Page

Hero Section

Headline:

"Try before you install."

Subhead:

"Test TextSelect on live examples—no extension required. See exactly how it handles your trickiest text selections."

Interactive Demo Area

Instructions Box:

"Double-click any text below to see TextSelect in action. Watch how it grabs entire strings—symbols and all."

Demo Examples:

Example 1: Code Variables

```
const USER_SESSION_TOKEN = "abc-123-xyz"  
const filePath = "/home/user/documents/report_2024.pdf"  
const apiEndpoint = "https://api.company.com/v2/users"
```

Label: "Try selecting these variable names"

Example 2: File Names

```
project-final-draft-v3.docx  
meeting_notes_2024_Q4.txt  
screenshot-2024-12-01-at-10.30.45.png
```

Label: "Double-click any filename"

Example 3: Email Addresses

```
john.doe@company-name.io  
support+help@startup.co  
user_123@mail-server.org
```

Label: "Select these email addresses"

Example 4: URLs

```
https://docs.example.com/api/v2/authentication
github.com/username/repo-name/issues/42
app.company.com/dashboard/settings/profile
```

Label: "Grab these URLs in one click"

Settings Panel (Live Preview)

Headline:

"Customize your selection rules"

Toggles:

[ON] Hyphen (-)
[ON] Underscore (_)
[OFF] Period (.)
[ON] Slash (/)
[ON] Colon (:)
[OFF] Comma (,)

Live Demo:

As you toggle settings, the demo text above updates to show what gets selected based on your rules.

Bottom Section

Headline:

"Convinced? Get the real thing."

Body:

"This playground is a simplified preview. The full extension includes the quick-copy button, link selection, and works on every website."

CTA:

- Primary: "Install TextSelect"
 - Secondary: "See All Features"
-

Donate Page

Hero Section

Headline:

"Keep TextSelect free. Forever."

Subhead:

"TextSelect will always be free, open-source, and privacy-first. Your support helps us maintain and improve it."

Why Donate Section

Headline:

"Where your support goes"

Body:

TextSelect is built by a small team (okay, mostly one person) who believe productivity tools shouldn't cost money or harvest your data. Here's how donations help:

-  **Ongoing Maintenance:** Browser updates break things. We fix them.
-  **New Features:** Requested features like regex support, per-site rules, and advanced customization.
-  **Infrastructure:** Hosting this site, documentation, and support channels.
-  **Documentation:** Tutorials, guides, and onboarding for new users.

Key Promise:

"We'll never gate features behind a paywall. Donations are 100% optional."

Donation Tiers (Optional)

Coffee Tier - \$3

"Covers hosting for a month. You're a legend."

Pizza Tier - \$10

"Funds a feature update. You're in the credits."

Rocket Tier - \$25+

"Keeps TextSelect alive for months. You're a patron saint."

Custom Amount:

"Pay what feels right. Every bit helps."

Alternative Support Options

Headline:

"Can't donate? Here's how else you can help:"

-  **Rate us** on the Chrome Web Store, Firefox Add-ons, or Edge Add-ons
 -  **Share** TextSelect with your dev team or productivity nerds
 -  **Report bugs** so we can fix them faster
 -  **Request features** that would make your workflow smoother
 -  **Write a review** or blog post about how you use TextSelect
-

Bottom CTA

Headline:

"Thanks for keeping the internet weird and useful."

Subtext:

"Whether you donate or not, we're glad you're here."

Browser Extension Store Listings

Chrome Web Store

Name:

TextSelect.click - Smart Text Selection

Short Description (132 chars max):

Select text with symbols (hyphens, underscores, slashes) in one double-click. Perfect for developers, writers, and productivity fans.

Full Description:

Stop fighting with broken text selection.

TextSelect makes your browser's text selection work the way your brain expects. Double-click to select:

- File names: project-final-v3.docx

- Code variables: `API_KEY_2024`
- URLs: `docs.site.com/setup`
- Email addresses: `user.name@company.io`

Features: ✓ Smart symbol recognition (hyphens, underscores, slashes, etc.) ✓ Quick-copy button (no right-click menus) ✓ Select links without clicking them ✓ Customizable symbol rules ✓ 100% local—no tracking, no data collection

Perfect for:

- Developers copying code, APIs, and file paths
- Writers managing file names and references
- Anyone tired of broken copy/paste workflows

Privacy First:

TextSelect runs entirely in your browser. No external API calls. No analytics. Your data stays yours.

Free forever. Open source.

Firefox Add-ons (Similar structure, tailored for Firefox audience)

Tagline:

"Text selection that actually works—for developers, writers, and everyone in between."

 Social Media Copy

Twitter/X Launch Thread

Tweet 1:

Tired of fighting with your browser to copy file names like `my-project-v2.js`?

I built TextSelect to fix that. One double-click. Entire string. Every time.

Free Chrome/Firefox/Edge extension 👉

[link]

Tweet 2:

What it does:

- Selects text WITH symbols (hyphens, underscores, slashes)

- Quick-copy button (no right-click)
- Grab links without clicking them
- 100% local (zero tracking)

Perfect for devs, but honestly? Everyone should use this.

Tweet 3:

Before: Triple-click, drag, hope for the best After: Double-click, done

That's the whole pitch. Install it, save yourself 10 seconds a day (which adds up to hours annually).

Also it's free forever because paywalling productivity tools is evil.

LinkedIn Post

Headline:

"I fixed the most annoying part of working in a browser"

Body:

If you've ever tried to copy `my-file-name.js` and only gotten "file," you know the pain.

I spent way too much time fighting with text selection—especially as a developer copying API keys, file paths, and URLs. So I built TextSelect, a browser extension that makes selection work the way it should.

One double-click. Entire string. No drama.

Key features:

- Smart symbol recognition (hyphens, slashes, underscores, etc.)
- Quick-copy button for one-click copying
- Select hyperlink text without triggering the link
- Fully customizable (toggle which symbols matter)
- 100% private (runs locally, no tracking)

It's free, open-source, and available for Chrome, Firefox, and Edge. Over 50,000 people are already using it to save time every day.

If you spend any time copying text in a browser (which... you do), this will make your life easier.

[Link to extension]

Reddit Post (r/productivity, r/webdev, etc.)

Title:

[FREE] I built a browser extension that fixes text selection (especially for developers)

Body:

If you've ever tried to select `my-file-name.js` by double-clicking and only gotten "file," this is for you.

What it does:

TextSelect makes your browser's text selection work with symbols like hyphens, underscores, slashes, etc. Double-click to grab entire file names, code variables, URLs, and email addresses.

Why I built it:

I got tired of triple-clicking, dragging, and fighting with my browser every time I needed to copy an API key or file path. Figured other people had the same problem.

Key features:

- Smart symbol support (customizable)
- Quick-copy button (no right-click menus)
- Select links without accidentally clicking them
- 100% local (no tracking, no data collection)
- Free forever

Available for Chrome, Firefox, and Edge. It's open-source if you want to peek under the hood.

Happy to answer questions if anyone has them.

Email Drip Campaign (For Newsletter/Updates)

Email 1: Welcome Email

Subject: Welcome to TextSelect 🙌

Body:

Hey [Name],

Thanks for installing TextSelect! You just saved yourself from a lifetime of broken copy/paste frustration.

Quick start:

1. Find some text with symbols (like `file-name.js`)
2. Double-click it
3. Watch it actually select the whole thing

That's it. That's the magic.

Pro tips:

- Click the quick-copy button that appears (no more Ctrl+C)
- Hover over links to select them without clicking
- Customize which symbols matter in Settings

If you run into issues or have feature requests, hit reply. I actually read these.

Maker of TextSelect

P.S. If you like it, leaving a review on the [Chrome/Firefox/Edge] store helps more people find it.

Email 2: Feature Deep Dive (Sent 3 days later)

Subject: TextSelect can do more than you think

Body:

Hey [Name],

You've been using TextSelect for a few days now—figured I'd share some features you might've missed.

1. Customize your symbol rules

Not everyone needs periods or commas included. Go to Settings and toggle what gets selected. Game changer for specific workflows.

2. Select text in links (without clicking)

Hover over any hyperlink and double-click. TextSelect grabs the text without triggering the link. Super useful for docs and articles.

3. Quick-copy button

After you select text, look for the floating copy button. One click = copied. No keyboard shortcuts needed.

What's next?

I'm working on per-site rules (so TextSelect can behave differently on GitHub vs. Google Docs). If you have feature ideas, reply and let me know.

Thanks for using TextSelect!

— [Your Name]

Email 3: Support Request (Sent 7 days later)

Subject: Quick favor?

Body:

Hey [Name],

TextSelect is free, has no ads, and doesn't track your data. That's by design—I hate that stuff too.

But here's the thing: keeping it alive (server costs, updates, bug fixes) takes time and money.

If TextSelect has saved you even 5 minutes, here's how you can help:

1. 🌟 Leave a review ([link to store])
2. 💬 Share it with your team/friends
3. ☕ Buy me a coffee ([donation link]) - 100% optional

Even if you can't donate, a review or share goes a long way. Thanks for being here.

Video Script (For Demo Video)

[0:00 - 0:05] Hook

"Ever try to copy `my-file-name.js` and only get 'file'? Yeah. Let's fix that."

[0:06 - 0:15] Problem

"Browsers treat hyphens, underscores, and slashes like word breaks. So double-clicking gives you half a selection. Annoying."

[0:16 - 0:25] Solution

"TextSelect fixes this. One double-click. Entire string. Every time. File names, URLs, code variables—done."

[0:26 - 0:35] Features

"Quick-copy button. Select links without clicking. Customize which symbols matter. All free."

[0:36 - 0:40] Privacy

"Runs entirely in your browser. No tracking. Your data stays yours."

[0:41 - 0:45] CTA

"Install TextSelect for Chrome, Firefox, or Edge. Link in description."

End of Copy Guide

Let me know if you need:

- A/B test variations for headlines
- Shorter/punchier versions for specific channels
- Technical documentation copy
- FAQ section
- Comparison page (TextSelect vs. native browser)

This should cover 90% of your site + marketing needs. LMK what else you need tweaked!
